Introduction

Welcome to the 32nd Panhellenic Conference of Academic Libraries!

It is with great pleasure that the Library and Information Center of the University of Macedonia organizes the 32nd Panhellenic Conference of Academic Libraries—an institution that, for over three decades, has fostered dialogue, collaboration, and the exchange of knowledge within the academic library community.

Under the **theme "Libraries with Human Intelligence: Data, Machines, and People in a Unified Knowledge Environment,"** the conference focuses on the transformation of academic libraries in an era where artificial intelligence, data, and digital technologies are redefining the creation and dissemination of knowledge. At the core remains the human element—characterized by critical thinking, creativity, and the responsible use of technology.

Academic libraries are evolving into dynamic hubs for knowledge, learning, and research, leveraging new technologies and supporting open science. At the same time, they are called upon to address issues such as the reliability of information, data protection, and equitable access to knowledge, combining innovation with ethics and social responsibility.

The 32nd PSAB aims to serve as a forum for exchanging experiences, highlighting best practices, and developing collaborations for the libraries of the present and the future.

We hope that this conference will serve as a starting point for new ideas, fruitful collaborations, and creative initiatives that will strengthen the role of academic libraries in education, research, and the open dissemination of knowledge.
